when after installing flutter. we try to run it in VS code or Android Studio. Most of the time we get this error as stated above. there are two or more solutions to this. I am will discuss three possible solutions to this.

Git is not installed.

if you cant see git in your installed applications. then the best way to install git with minimum effort is with the help of chocolatey. Here is the _reference_ how to install chocolatey on your system.
After its installed simply write this command "**choco install git.install**" in your administrator shell. it will automatically install latest git for you and will automatically set the PATH in windows environment variables.

## Git is installed but there is still an error.

then firstly you should check your path in environment variables. these three should be there

```
C:\Program Files\Git\bin\git.exe;C:\Program Files\Git\cmd;C:\Windows\System32
```

pasting these in environment variables will hopefully solve the problem or else find your path in your installed directory.

Permissions problems.

If every thing is set the final step could be to change the permissions for your IDE. for that right click your IDE application go to properties go to compatibility. and then check the option. **"Run this program as an administrator"**

Visual Studio Code Properties ✕

Security	Details	Previous Versions
General	Shortcut	Compatibility

If this program isn't working correctly on this version of Windows, try running the compatibility troubleshooter.

[Run compatibility troubleshooter]

How do I choose compatibility settings manually?

Compatibility mode

☐ Run this program in compatibility mode for:

[Windows 8 ⌄]

Settings

☐ Reduced color mode

[8-bit (256) color ⌄]

☐ Run in 640 x 480 screen resolution

☐ Disable fullscreen optimizations

☑ Run this program as an administrator

☐ Register this program for restart

☐ Use legacy display ICC color management

[Change high DPI settings]

[🛡 Change settings for all users]

[OK]   [Cancel]   [Apply]

properties menu.

This will solve the problem for you. Thanks

Flutter   Error
